

INSTALLING YOUR

SheGoes Lightroom Preset Pack

Thank you so much for supporting my blog and I hope you enjoy your presets!
Here are the instructions for installing presets into the Adobe Lightroom Mobile App.

*You'll need access to a Desktop or File Sharing Service in order to download the presets to your phone.

Option 1: (Requires Computer but Works for Everyone)

- 1) Download the Lightroom Mobile Preset Zip file to your desktop. Unzip the file and upload the images to your preferred file sharing service (Dropbox, Google Drive, etc.) Then log into that sharing service on your phone. (If you don't have access to a desktop, you will have to unzip the files on your phone using an app such as iZip.)
- 2) Open Lightroom Mobile and click on the blue button in the bottom right corner to import photos. Select "From Files". Open whichever file sharing service you chose to upload the images to. Select the photos to upload (they may look like they are unedited but the necessary data is stored in the images to apply the correct editing settings.)
- 3) Select the photos individually once they download. This should take you to the editing area. You'll see the name of the preset in the upper left corner as the image name. Click on the three dots in the upper right corner.
- 4) Select Create Preset. Choose a name for the preset (you can use the original name or put your own) and it will be saved onto your phone in the Presets area at the bottom menu in Lightroom.

Option 2: (Requires Only Phone, May Not Work On Every Device)

- 1) Download the Lightroom Mobile Preset Zip file from your phone to a file sharing service Dropbox, Google Drive, etc. Unzip the file in the file sharing service. If this doesn't work, try using an app like iZip to unzip the file on your phone.
- 2) Follow steps 2-4 in Option 1.
